360 Compression Services announces the global launch of its new business to provide products and technical services to Oil & Gas & Energy markets

360 Compression Services LLC opens today, its headquarters located just north of Houston Texas in Montgomery, including offices in Dubai United Arab Emirates. The new company is providing engineering, training, parts and technical services around the world.

With over 100 cumulative years of experience in the gas compression market, the 360 Leadership Team of Danilo Gulla, Kelly Brown, Rick Ykema & Samy N. Samy has a proven track record of driving business growth by focusing on winning with the customer. They have consistently led successful business teams and are excited about joining forces together to bring a high level of service back to the Oil & Gas industry.

Rick Ykema, Co-Owner of 360 Compression Services declares: “Our leadership team shares a common vision for changing gas compression with service. We believe that good design is powerful, hard work is essential and excellence through service is what our customers deserve. We want to earn and maintain customer trust and confidence in all that we do, and only the highest standards will guide everything we do. Our suppliers are also important to our success. Our long-term relationships with suppliers enable us to choose those whose values and quality are consistent with ours. Building lasting relationships is also a top goal. We believe in customer success without compromise.”

Global services provider

360 is featuring a global network team of strategically located representatives and channel partners for unlocking potential to service its customers with high level quality parts and expert services. 360’s global service network is also capable to help customers to improve their compressor performance with component upgrades (mechanical & automation). Engineered solutions are available featuring capabilities of basic engineering design, detailed design, forensic engineering, and noise vibration & fluid mechanic engineering.

Instructor led training and development courses are provided helping 360’s customers improve operational skill and working knowledge of their equipment. Programs offered are internal combustion engine fundamentals, reciprocating compressor fundamentals, combustion air intake & exhaust systems, lubrication & coolant analysis including custom programs based on customer needs.
